Dear Member:

We wanted to update you on the water situation, and apologize for not having updated you sooner.

Currently, we are still under Stage 3 of our Drought Contingency Plan. The City of Gordon is estimating that there is enough water in Lake C.B. Long and the old Gordon Lake to get us through the end of October.

We would like to thank you for doing your part in conserving water. However, due to the water shortage and our conservation efforts, we have been experiencing very low chlorine residuals, which caused the boil water notice that you received in June. We are still under the boil water notice. A chlorine booster pump has been installed at pump station #1 to elevate the chlorine levels in the system, but again due to conservation efforts of our membership, it is proving to be a difficult task in getting the chlorine residuals where they should be in order to rescind the boil water notice. We hope to have that resolved within the next week or two.

We are also in the process of getting a chlorine booster station set up at our master meter. This will allow us to get those members at the beginning of the system off the boil water notice as well.

We are working diligently to get the system back on par, and we ask for your continued patience and understanding.

Regards,

Barton Water Supply Corp.
